What lights up the night sky?

Page 2

The side that faces towards the sun
is day and filled with light

But as the earth turns round,
it becomes as dark as night.

Night and day, day and night,
the earth is never still.

The world just keeps on turning,
according to God's will.

Page 3

The moon is something we can see
when it is night outside.

Through the month it changes shape
as earth sun's light does hide.

When the sunlight's on it,
the moon shines very bright.

But earth can cast a shadow,
blocking out some light.

Page 4

When it's dark we also see

stars shining way up high.

But even in the daytime

they still are in the sky.

The stars are like the sun;

they are burning balls of fire.

Because they are so awesome,

praise for God they do inspire.

Page 5

As people gaze at stars,
they think in patterns they take shape.

Do you see a dipper
or a hunter with a cape?

And do you know that God
calls each of them by name?

He created each and every star,
not one of them the same.

Page 6

The universe goes on and on,

it doesn't every stop.

God holds it all in his hands,

he'll never let it drop.

So when at night it's dark outside

and stars fill up the sky,

Think about the love God has

as he watches from on high.

Page 1

The earth turns on its axis
each and every day.

It is always turning round
as still it cannot stay.

In one day the earth
completely turns around.

Continually it's moving,
rotating always found.

What lights up the night sky?

S—S	Make sign of "S"
Stars	Hold hands up in air and wiggle fingers
Light up the nighttime sky	Hands palms up out in front of body, move up & out From light position move hands from side to side
S—S—Stars	Same as above
God watches from on high	Lift arms up in air Tilt hands down and look down
